Coccidioidomycosis in California Provisional Monthly Report

January - November 2021

(as of November 30, 2021)

Center for Infectious Diseases
Division of Communicable Disease Control
Infectious Diseases Branch
Surveillance and Statistics Section

(An [accessible Excel file version of the
November 2021 Coccidioidomycosis in California
Provisional Monthly Report](#) is available for download)

**Cumulative Reported Suspect, Probable, and Confirmed Cases of Coccidioidomycosis in January through November
by Local Health Jurisdiction and Year of Estimated Onset, California, 2019-2021**
(reported as of November 30 of each year*)

	Year of Estimated Onset**		
County	2021	2020	2019
California Total	7,040	5,960	7,793

	Year of Estimated Onset**		
Local Health Jurisdiction	2021	2020	2019
Alameda County Total	91	60	93
Alpine	0	0	0
Amador	2	8	5
Butte	11	11	6
Calaveras	0	8	3

Reported Suspect, Probable, and Confirmed Cases of Coccidioidomycosis by Month and Year of Estimated Onset, California, 2019-2021

	Month of Estimated Onset**											
Year of Estimated Onset**	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC
2021 (Reported as of November 30, 2021)†	754	654	665	586	599	629	688	623	636	677	529	.
2020 (Reported as of November 30, 2021)	723	743	692	492	452	522	485	600	610	730	684	659
2019 (Reported as of November 30, 2020)	757	697	804	673	716	614	648	767	760	1,009	988	861

Technical Notes

In interpretation of the numbers in this report, please consider the following points:

* Data presented in this report may differ from previously published data due to delays inherent to case reporting, laboratory reporting, and epidemiologic investigation.

** Estimated onset date is the date closest to the time when symptoms first appeared. For cases which date of onset was not recorded, the estimated onset date can range from the date of first appearance of symptoms to the date the report was made to the California Department of Public Health.

*** SC Case counts have been suppressed due to small numbers based on Publication Scoring Criteria published in <https://www.dhcs.ca.gov/dataandstats/Documents/DHCS-DDG-V2.0-120116.pdf>.

† Due to reporting delays, counts for January - November 2021 (reported as of November 30 of same year) are likely to increase and not directly comparable to counts for January - November 2020 and January - November 2019 (reported as of November 30 of the following year) as presented.

Because coccidioidomycosis can occur as a chronic condition and be reported more than once, we included only the first report of coccidioidomycosis per person using a probabilistic de-duplication method spanning multiple reporting years.

Local health jurisdictions reviewed cases and determined whether surveillance case definitions were met to classify cases as Confirmed, Probable, or Suspect according to established clinical and laboratory criteria. All cases classified as Confirmed, Probable, and Suspect are included in this report.

Combined provisional Suspect, Probable, and Confirmed case counts in this report may differ from counts of Confirmed cases that CDPH will eventually publish in final year-end surveillance reports.

Prepared by Alyssa Nguyen, Gail Sondermeyer Cooksey, Yanyi Djamba, Seema Jain, and Duc Vugia, Infectious Diseases Branch, Division of Communicable Disease Control, Center for Infectious Diseases, California Department of Public Health.
